

Make a table of values. Then graph each of the following.

1. $f(x) = \llbracket x - 2 \rrbracket$

x	f(x)
2	2
2.5	2
2.9	2
3	1
3.5	1
3.9	1
4	2

- TIPS:
- ① use positive #s for x
 - ② Plot enough till you see a pattern
 - ③ Each step should have 1 open end.
 - ④ Fill in rest of graph

2. $x = \llbracket y \rrbracket - 1$

x	f(y) y
1	2
1	2.1
1	2.9
2	3
2	3.1
2	3.9

3. $x = \llbracket y - 1 \rrbracket$

x	f(y) y
1	2
1	2.5
1	2.9
2	3
2	3.5
2	3.9
3	4
